unleash

Create better line breaks

Description

Currently `unleash()` only adds line breaks after sentences. For better results, you should also add line breaks after long sentence parts, manually.

Usage

```
unleash(path, new_path = path)
```

Arguments

<code>path</code>	Path to the Markdown file
<code>new_path</code>	Path where to save the new file

Value

Path to the new file (invisibly)

Examples

```
markdown_file <- system.file("example.md", package = "aeolus")
readLines(markdown_file)
unleash(markdown_file)
readLines(markdown_file)
```
