

# Package: fastMatMR (via r-universe)

July 7, 2024

**Title** High-Performance Matrix Market File Operations

**Version** 1.2.5

**Description** An interface to the 'fast\_matrix\_market' 'C++' library, this package offers efficient read and write operations for Matrix Market files in R. It supports both sparse and dense matrix formats. Peer-reviewed at ROpenSci (<https://github.com/ropensci/software-review/issues/606>).

**Author** Rohit Goswami [aut, cre] (<https://orcid.org/0000-0002-2393-8056>), Ildiko Czeller [rev] (<https://orcid.org/0000-0002-9418-4589>), Adam Lugowski [ctb] (<https://orcid.org/0009-0004-0922-4067>)

**Maintainer** Rohit Goswami <rgoswami@ieee.org>

**License** MIT + file LICENSE

**SystemRequirements** C++17

**Encoding** UTF-8

**Roxygen** list(markdown = TRUE)

**RoxygenNote** 7.2.3

**LinkingTo** cpp11

**Suggests** ggplot2, knitr, Matrix, microbenchmark, rmarkdown, testthat (>= 3.0.0)

---

fmm_to_mat	<i>Convert Matrix Market File to Matrix</i>
------------	---

---

### Description

This function reads a Matrix Market file and converts it to a matrix in R.

### Usage

```
fmm_to_mat(filename)
```

### Arguments

filename      The name of the input Matrix Market file to be read.

### Value

A matrix containing the data read from the Matrix Market file.

### Examples

```
# Create
sample_mat <- matrix(c(1, 2, 3, 4), nrow = 2)
temp_file_mat <- tempfile(fileext = ".mtx")
write_fmm(sample_mat, temp_file_mat)
# Read
mat <- fmm_to_mat(temp_file_mat)
```

---

fmm\_to\_sparse\_Matrix    *Convert Matrix Market File to Sparse Matrix*

---

**Description**

This function reads a Matrix Market file and converts it to a sparse matrix in R using the Matrix package.

**Usage**

```
fmm_to_sparse_Matrix(filename)
```

**Arguments**

filename            The name of the input Matrix Market file to be read.

**Value**

A dgCMatrix object containing the data read from the Matrix Market file.

**Examples**

```
# Create
sample_sparse_mat <- Matrix::Matrix(c(1, 0, 0, 2), nrow = 2, sparse = TRUE)
temp_file <- tempfile(fileext = ".mtx")
write_fmm(sample_sparse_mat, temp_file)
# Read
sparse_mat <- fmm_to_sparse_Matrix(temp_file)
```

---

fmm\_to\_vec            *Convert Matrix Market File to Numeric Vector*

---

**Description**

This function reads a Matrix Market file and converts it to a numeric vector in R.

**Usage**

```
fmm_to_vec(filename)
```

**Arguments**

filename            The name of the input Matrix Market file to be read.

**Value**

A numeric vector containing the data read from the Matrix Market file.

**Examples**

```
# Create
sample_vec <- c(1, 2, 3)
temp_file_vec <- tempfile(fileext = ".mtx")
write_fmm(sample_vec, temp_file_vec)
# Read
vec <- fmm_to_vec(temp_file_vec)
```

---

intmat\_to\_fmm

*Convert a Numeric Matrix to Matrix Market Format*

---

**Description**

This function takes a numeric matrix and converts it into a Matrix Market file.

**Arguments**

input	A numeric matrix to be converted.
filename	The name of the output file where the Matrix Market formatted data will be saved.

**Value**

A boolean indicating success or failure. Writes a MTX file to disk.

**Examples**

```
intmat <- matrix(c(1L, 2L, 3L, 4L), nrow = 2)
intmat_to_fmm(intmat, tempfile(fileext = ".mtx"))
```

---

intvec\_to\_fmm

*Convert a numeric integer vector to Matrix Market Format*

---

**Description**

This function takes a numeric intvector and converts it into a Matrix Market output file.

**Arguments**

input	A numeric integer vector to be converted.
filename	The name of the output file where the Matrix Market formatted data will be saved.

**Value**

A boolean indicating success or failure. Writes a MTX file to disk.

**Examples**

```
intvec <- c(1L, 2L, 3L)
intvec_to_fmm(intvec, tempfile(fileext = ".mtx"))
```

---

mat\_to\_fmm

---

*Convert a Numeric Matrix to Matrix Market Format*

---

**Description**

This function takes a numeric matrix and converts it into a Matrix Market file.

**Arguments**

input	A numeric matrix to be converted.
filename	The name of the output file where the Matrix Market formatted data will be saved.

**Value**

A boolean indicating success or failure. Writes a MTX file to disk.

**Examples**

```
mat <- matrix(c(1, 2, 3, 4), nrow = 2)
mat_to_fmm(mat, tempfile(fileext = ".mtx"))
```

---

sparse\_Matrix\_to\_fmm

---

*Convert a Sparse Numeric Matrix to Matrix Market Format*

---

**Description**

This function takes a sparse numeric matrix and converts it into a Matrix Market file.

**Arguments**

input	A sparse numeric matrix to be converted.
filename	The name of the output file where the Matrix Market formatted data will be saved.

**Value**

A boolean indicating success or failure. Writes a MTX file to disk.

**Examples**

```
sparse_mat <- Matrix::Matrix(c(1, 0, 0, 2), nrow = 2, sparse = TRUE)
sparse_Matrix_to_fmm(sparse_mat, tempfile(fileext = ".mtx"))
```

---

`vec_to_fmm`*Convert a Numeric Vector to Matrix Market Format*

---

**Description**

This function takes a numeric vector and converts it into a Matrix Market output file.

**Arguments**

<code>input</code>	A numeric vector to be converted.
<code>filename</code>	The name of the output file where the Matrix Market formatted data will be saved.

**Value**

A boolean indicating success or failure. Writes a MTX file to disk.

**Examples**

```
vec <- c(1, 2, 3)
vec_to_fmm(vec, tempfile(fileext = ".mtx"))
```

---

`write_fmm`*Convert Various Numeric Types to Matrix Market Format*

---

**Description**

This function takes different types of numeric inputs—vectors, matrices, and sparse matrices—and converts them into Matrix Market files. The output file is written to disk.

**Usage**

```
write_fmm(input, filename = "out.mtx")
```

**Arguments**

<code>input</code>	A numeric object to be converted. This can be a numeric vector, a matrix, or a sparse matrix.
<code>filename</code>	The name of the output file where the Matrix Market formatted data will be saved. It is recommended to use a filename ending with ".mtx" for clarity.

**Value**

A boolean indicating success or failure. Writes a MTX file to disk.

**Examples**

```
vec <- c(1, 2, 3)
mat <- matrix(c(1, 2, 3, 4), nrow = 2)
sparse_mat_diag <- Matrix::Matrix(c(1, 0, 0, 2), nrow = 2, sparse = TRUE)
## Diagonal ^-
sparse_mat <- Matrix::Matrix(c(1, 1, 0, 2), nrow = 2, sparse = TRUE)
## And not diagonal -^
write_fmm(vec, tempfile(fileext = ".mtx"))
write_fmm(mat, tempfile(fileext = ".mtx"))
write_fmm(sparse_mat_diag, tempfile(fileext = ".mtx"))
write_fmm(sparse_mat, tempfile(fileext = ".mtx"))
```
